„Blockchains are overhyped.“

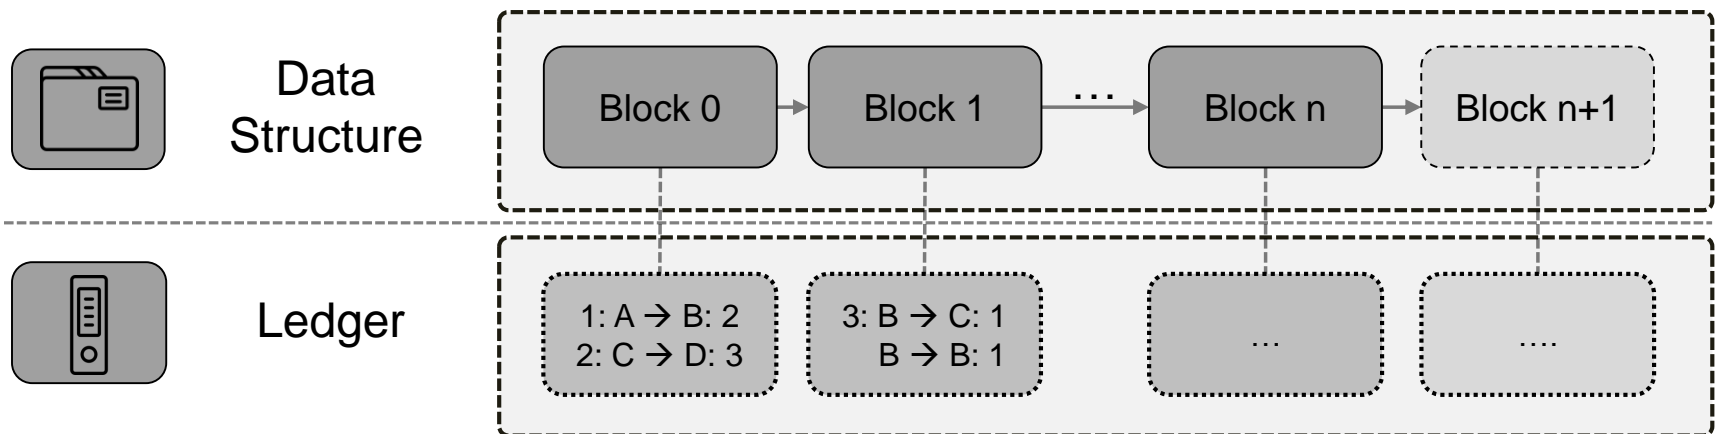

Gideon Greenspan, Founder / CEO of Coin Sciences Ltd.

Blockchain – An Introduction (Recap)

A Definition of the Term „Blockchain“

“A blockchain [...] is a **distributed database** that maintains a continuously-growing list of ordered records called blocks. Each block contains a timestamp and a link to a previous block. **By design** blockchains are **inherently resistant to modification** of the data: once recorded, the data in a block cannot be altered retroactively.”

Functionality: Categorization Example

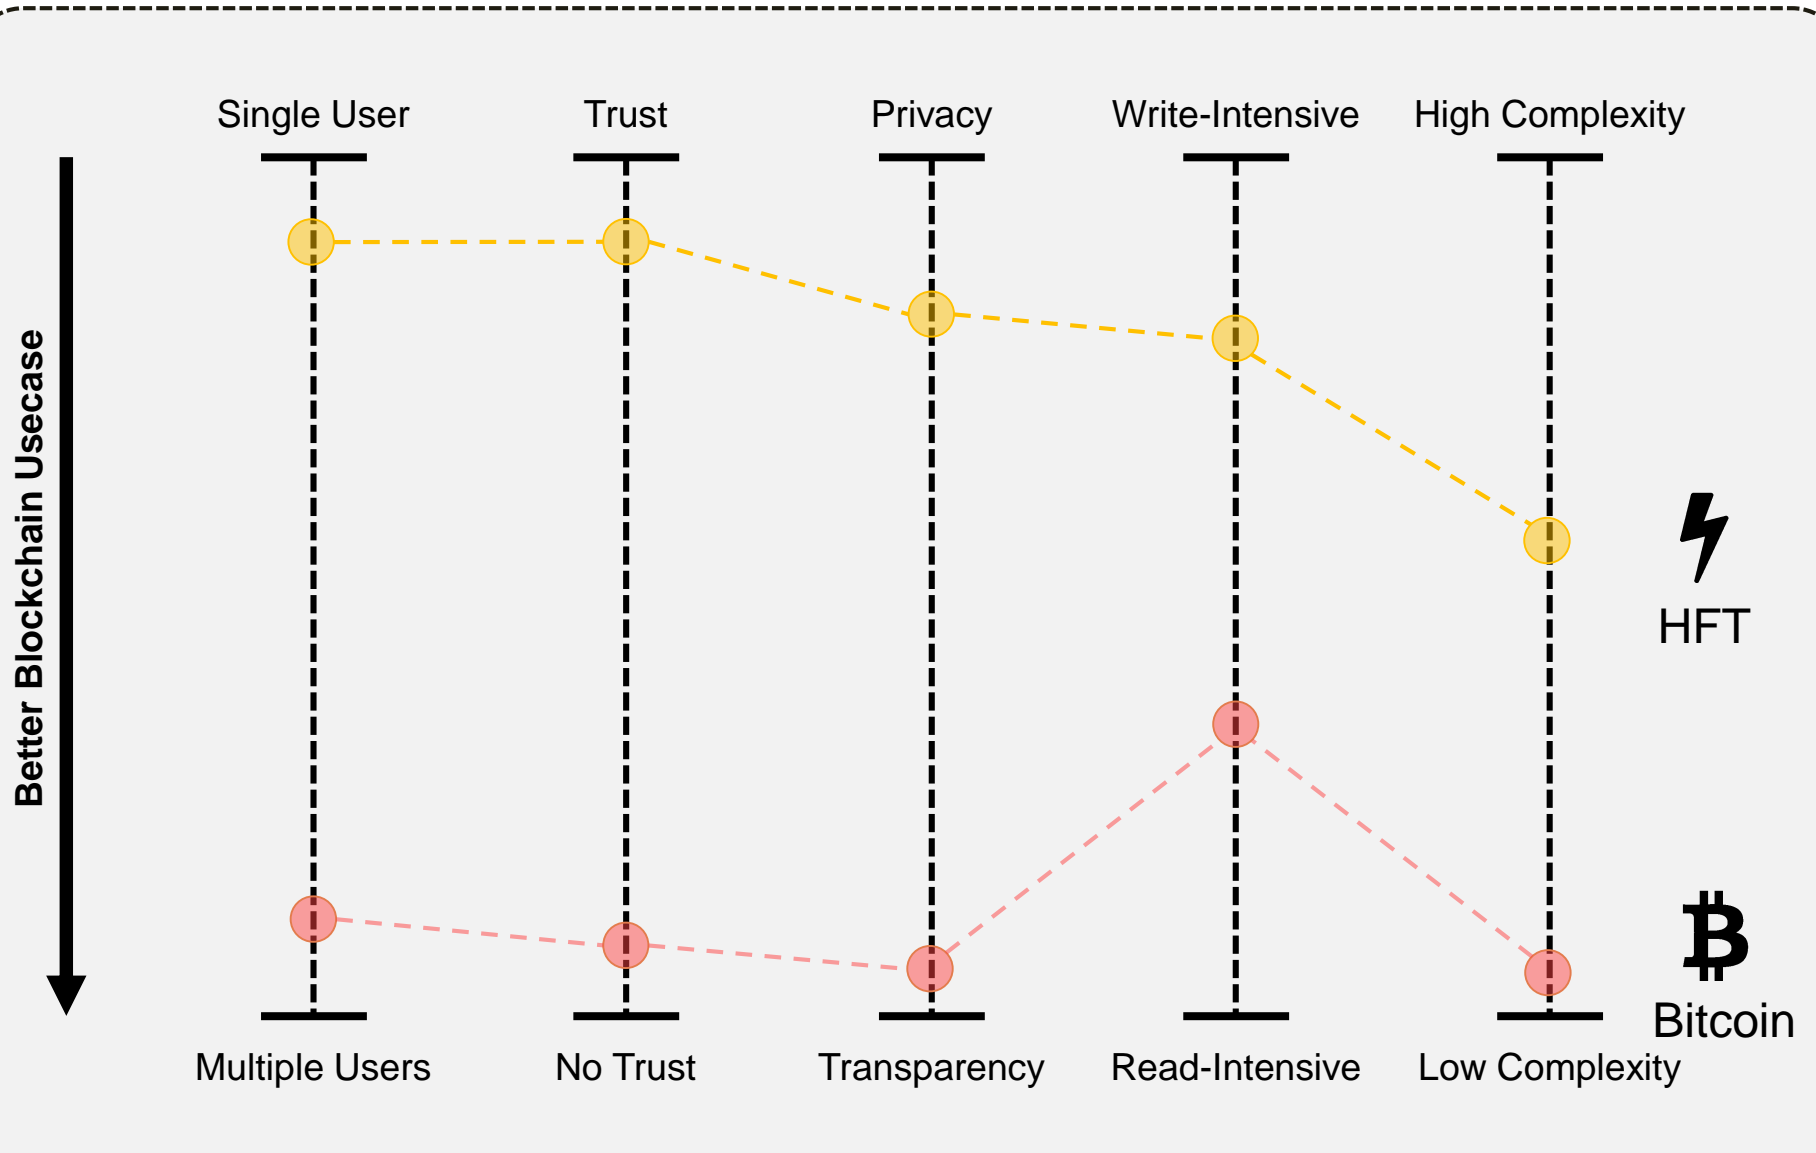

→ No clear classification in one functionality

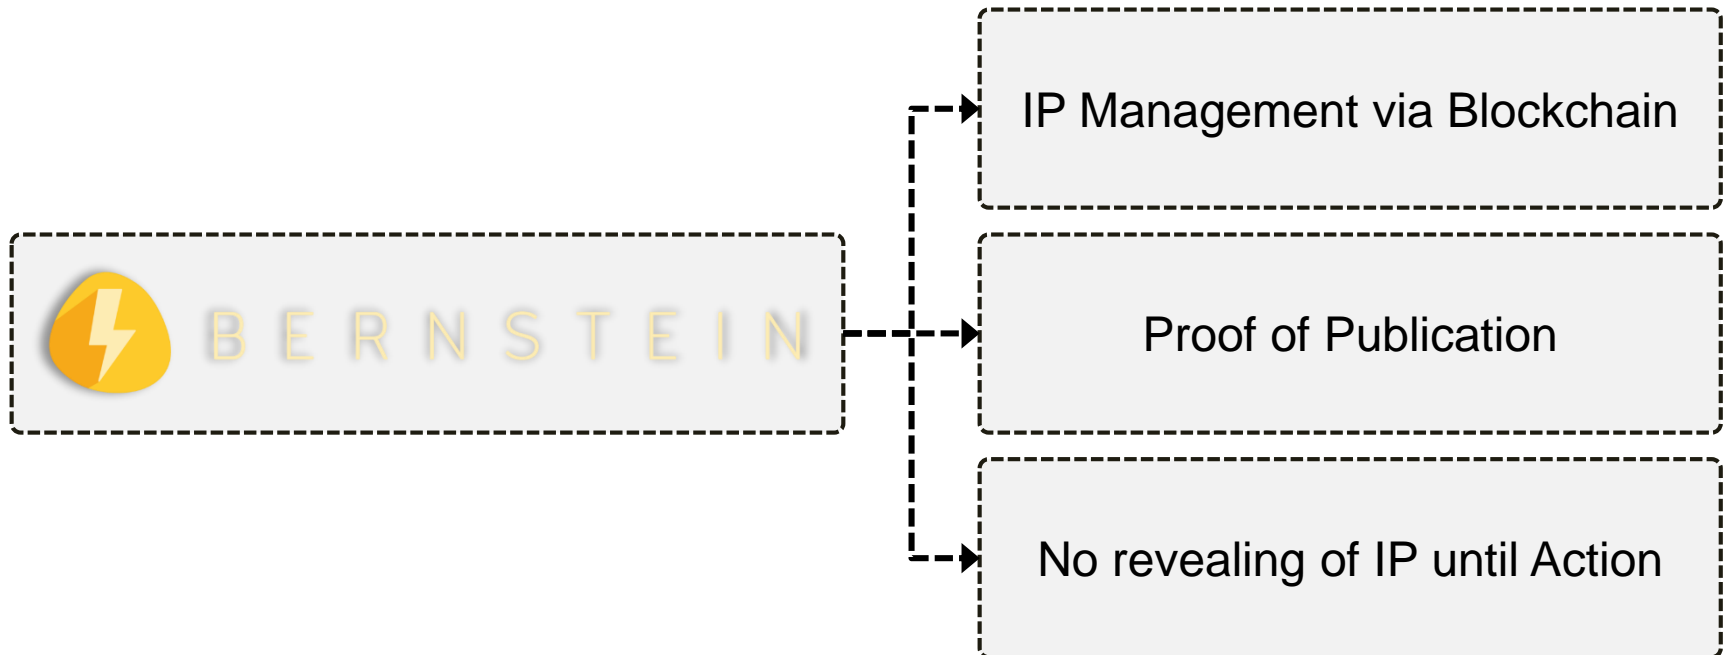

→ Solution: Weight Categories by usage from 1 (low usage) to 3 (high usage)

Functionality

Requirements for Use Cases (Interview Results)

Use Case: Process

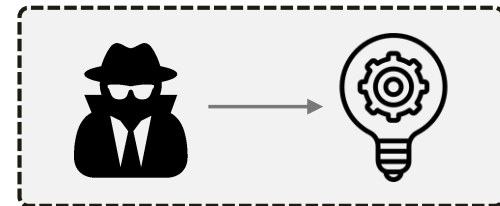

1 Alice **has** an **idea**.

2 She wants to **protect** her **IP**, she therefore **stores** the IP in the **Blockchain**.

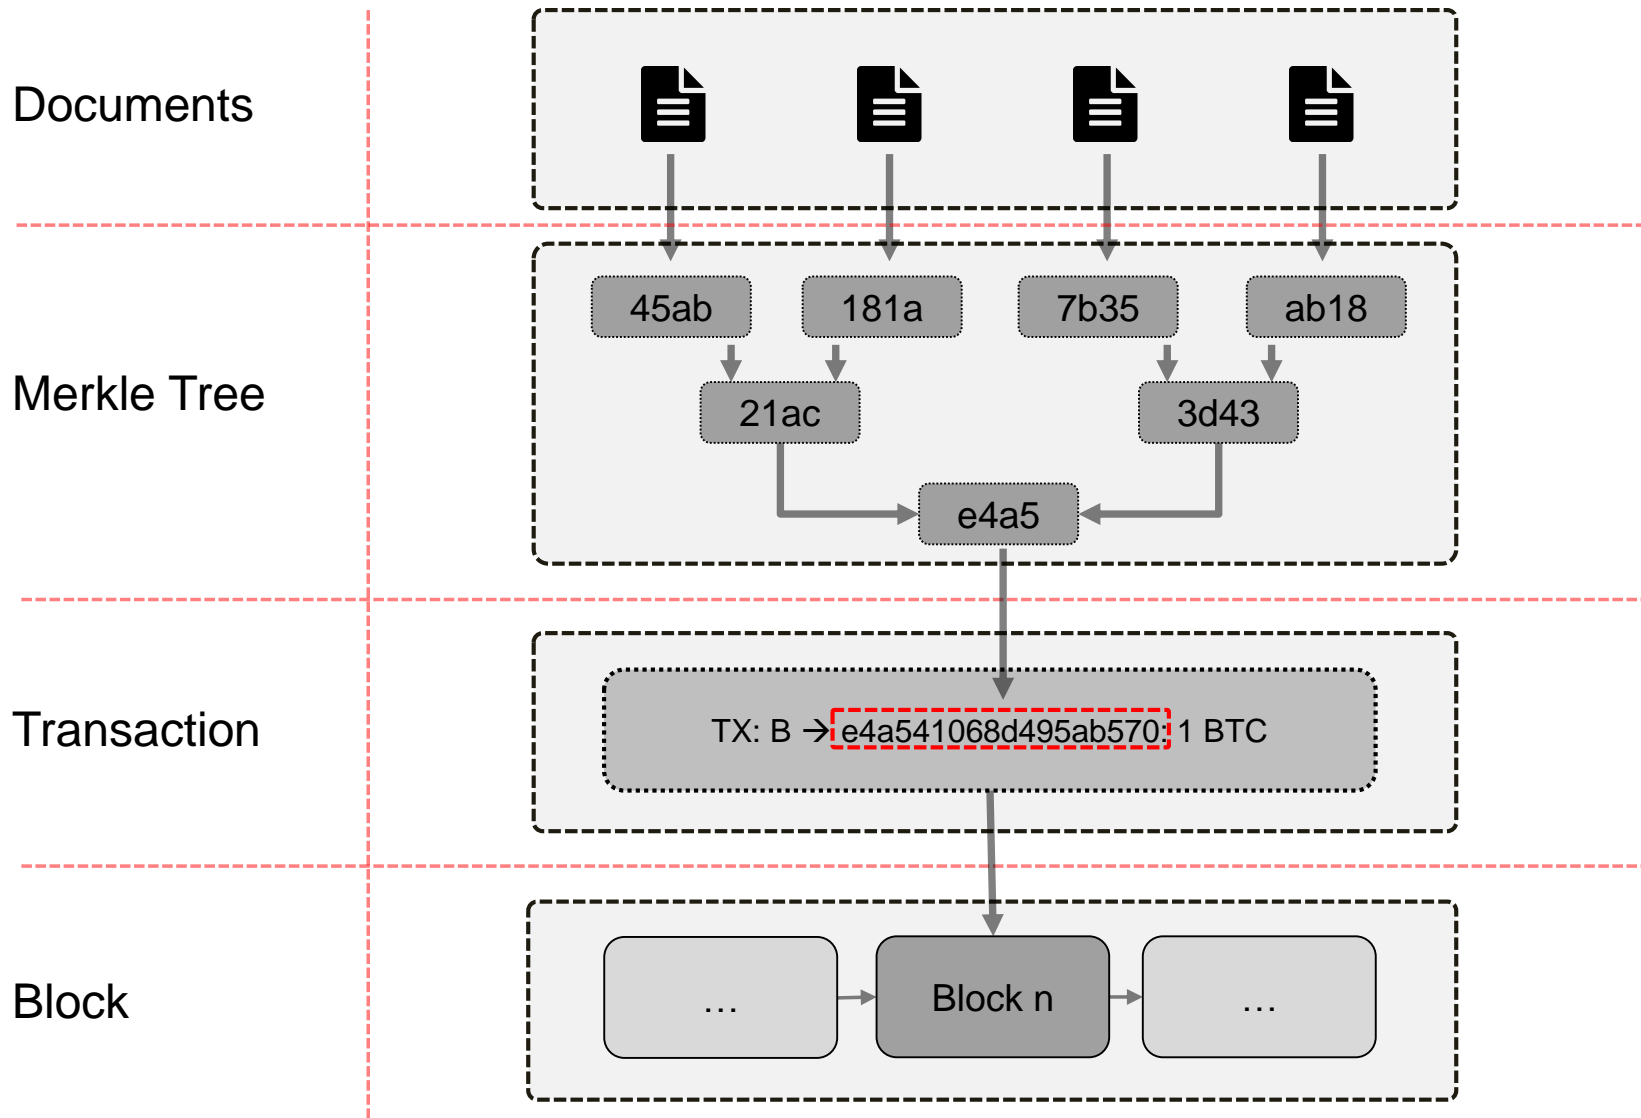

3 Mallory **steals** her idea.

4 Alice can **prove** her possession at court using the **Blockchain** entry.
